2015 Distribution of Indiana Licensed Professional Geologists

The Indiana Board of Licensure of Professional Geologists actively maintains a database of Indiana Licensed Professional Geologists (LPGs) on its website: http://igs.indiana.edu/LPG/. The LPG database is updated at least weekly as new geologists are licensed and as the status of those who are licensed changes (e.g., current, expired, or deceased).

As of June 9, 2015, there were 1,317 current licensees in the LPG database, 428 of whom (32.5%) reside in Indiana. Nearly as many (419, or 31.8%) reside in the immediately adjacent states of Illinois, Kentucky, Michigan, and Ohio. The balance of them reside elsewhere in the United States (463), in the Armed Services (2), or in Canada or Chili (5).

The following two maps show the distribution of LPGs in Indiana’s 92 counties and the distribution of LPGs throughout the United States and elsewhere.

The Board gratefully acknowledges the assistance of Indiana Geological Survey Cartographic Specialist Matt Johnson, who created the maps from the data that it provided.
